

GOALS AND OBJECTIVES

The Cost Control is identified today as a tool that allows you to analyze actual performance of the project. By classical methods closely related to accounting concepts you switch to modern methods of Cost Control.

The methods, which lead to constant monitoring of the performance of each project, representing a wealth necessary for the management of projects. Upon completion of the course the participant will be able to understand the cost structure, make the order budget, manage and verify cash flow throughout the life cycle of the project.

The Mini Master Control Construction Cost cutting has a very practical and operational, our teachers will serve as examples calibrated to real case studies in order to give the Mini Master connotations mostly operational.
